

Supaturf

Water Management

What

Ultraflo Advance®

Ultraflo Advance® is an advanced, long-term, non-ionic wetting agent, available in both granular and liquid form.

Why

1. Stays active throughout the growing season.
2. Reduces irrigation requirements up to 30%.
3. Restores the soil's natural ability to attract and retain water.
4. Ensures even distribution of water in the rootzone.
5. Promotes deeper rooting and discourages dry spot caused by drought stress.
6. Improved water penetration molecule helps reduce run-off from slopes and the subsequent risk of water-logging.
7. Remains effective longer and requires lower water rates for application.
8. Low dilution rates (1:19) means far greater coverage from a single tank.

When

Application from March to October or when growing conditions dictate.

Application

10 litres Liquid: Apply at 2.5-5.0 litres per 1000m² in 95 litres of water.

15kg Granular: Apply at 30kg per 1000m²

What

Early Start[®]

Early start is an excellent product for controlling dew formation on turf.

Why

1. Reduces the danger from Fungal disease infection by removing water droplets from the leaf sheaf/plant stem interface.
2. Provides 1-3 weeks dew control depending on application rate used.
3. Does not need watering in after application.

When

Can be used all year round (depending on degree of dew formation).

Application

Apply at 0.12 – 0.2 litres per 1000m² in 40-60 litres of water. Pack Size- 2 litres.

What

Clearing[®]

Clearing is an effective treatment for fairy rings. *Note: Clearing[®] is NOT a fungicide*

Why

1. Common in all types of turf, fairy rings are caused by a water repellent fungal growth.
2. Any soil affected can become hydrophobic.
3. Clearing's special blend of surfactants work by re-wetting area of turf colonised by fairy ring mycelium.
4. Enables the re-growth of grass in effected areas.

When

Clearing can be used all year round.

Application

Apply at 4 Litres per 1000m² in 100-200 litres of water. Pack Size- 2.5 litres
